

HANDY-MASHER

1

Take the required amount of grain and heated water and place in the Handy-Masher for the specified mash time.

2

Remove lid and drain about one cup of the wort from the tap. Pour wort over top of grain. (This will remove any particles of the husk that have slipped through the screen).

3

Reopen tap and drain into pot. Sprage off grain with tap open and lift rear of Handy-Masher to aid in drainage. (Sprage water should not be over 170 f!).
